It's Movember !!

Since 2003, Movember has funded more than 1,250 men's health projects around the world, challenging the status quo, shaking up men's health research and transforming the way health services reach and support men.

Your child's vaccine schedule

* first dose, **second dose, *** third dose
 6-in-1 protects against diphtheria, tetanus, whooping cough, polio, Hib and hepatitis B
 4-in-1 protects against diphtheria, tetanus, whooping cough and polio

- Childhood illnesses like measles and whooping cough are rising
- These illnesses can make children very sick, leading to hospital stays or lifelong problems
- If your child is not vaccinated, they are not protected
- It's important that vaccines are given on time for the best protection. Some need booster doses later too
- Check your child's red book or speak to your GP practice to see if they have missed any
- You can still catch up on most missed vaccines
- All the childhood vaccinations are free. As children grow up, they will be offered more vaccine appointments, right up until they are teenagers. Some vaccines are offered at school
- Vaccinations offered by the NHS are thoroughly tested to assess how safe and effective they are. All medicines can cause side effects, but vaccines are among the very safest.
- Research from around the world shows that immunisation is the safest way to protect our children's health

Follow your child's vaccine schedule to protect them against illnesses

Stick this timeline up as a useful reminder

Are your child's vaccines up to date?
